

## Data Sheet

### Fal-A222-BW

(Antiscalent for Reverse Osmosis Membrane)

Description	<b>Fal-A222-BW</b> is a synergetic formula of different types of organic phosphonate, different of phosphate, strong chelating agent and wetting agent.
	<b>Fal-A222-BW</b> is designed to inhibit inorganic scale formation in membrane separation processes .Also controls iron precipitation.
	<b>Fal-A222-BW</b> controls calcium carbonate, calcium sulphate, metal oxides, silica, Barium and Sodium sulphate scale in water with high fouling potential.
	<b>Fal-A222-BW</b> contains sanitizing agent to control biological growth in feed water.
Chemical Feed and Control	<b>Fal-A222-BW</b> is normally feed continually prior to the final cartridge filter. A dosing pump must be used either directly or from a dilution or directly from the drum to the feed water line. The ideal dose is 3-5 ppm
Physical Properties	Clear Colorless to Yellow liquid pH : 6-7
Package	25 kg
